

**Start by checking the depth of your window: This will determine whether you will inside mount or outside mount your blind.**

Roller shades & Dual shades require 2 ½" depth and cellular shades require 1" depth

(Use Page 1 if you are using inside mount, Use Page 2 if you are using an outside mount)

\*\*\*Please note that cellular shades are best suited for windows that allow an inside mount.\*\*\*

Room Name	Type of Shade (Roller, Cellular, Dual)	Width (in inches)	Height (in inches)

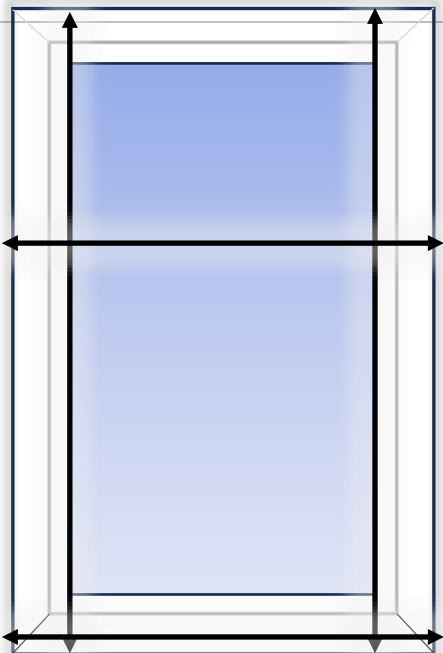

**For INSIDE MOUNT:**

Measure across the top, middle and bottom - inside the window frame. The smallest of these measurements will be your actual width. **Round it down** to the nearest 1/8<sup>th</sup> of an inch. Write this number in the "width" column above.

To determine the height: Measure top down on the right & left inside the window frame. The largest of these measurements will be your actual height. **Round it up** to the nearest 1/8<sup>th</sup> of an inch. Write this down in the "height" column above.

Order your shades using the smallest width and largest height of your window. We will make the correct deductions for a perfect fit.

Room Name	Type of Shade (Roller, Cellular, Dual)	Width (in inches)	Height (in inches)

**For OUTSIDE MOUNT:**

Measure across the top, middle and bottom on the outside of the window frame. The largest of the three measurements will be your actual width. Write this number in the “width” column above.

To determine the height: Measure top down on the right & left outside of the window frame. The largest of these measurements will be your actual height. Add 3” to this measurement to ensure the window is fully covered once the blind is mounted above the window. Write this number in the “Height” column above.

Order your shades using these measurements. We make NO adjustments to outside mounted blinds so the final finished product is based on your exact measurements.
